

Nearpod Interactive/Chalk Talk Activity with anticipatory questions:

Note: This could be a Chalk Talk activity where students silently go around the room to these questions on different posters and write their answers. Another option would be to put the questions into an interactive Nearpod presentation which has the option to create poll questions and “collaborate boards” where every student can post a response. Padlet would be another option for students to post answers so that the whole class can see and discuss.

- How much of the global population is affected by global water scarcity? (poll)
- Why is clean water important?
- Where in the world do you think clean water is an issue? List specific examples.
- What causes water contamination?
- How many people worldwide drink polluted water? (poll)
- How many people die worldwide every year due to diarrheal diseases from poor hygiene and unsafe water? (poll)
- What are other issues that could be caused by lack of or limited access to clean water and sanitation?
